LIFECYCLE MANAGEMENT

AMD // Intel

Routine management and lifecycle updates: Same time, same effort

Device management never stops: Apps to deploy, fleets to patch, and policies to enforce are a constant for IT. That rhythm shouldn't change because of the processor inside your Dell PC.

IT workflows are identical, regardless of the processor

Perform routine management via the Dell Management Portal

Deploy applications across teams, configure BIOS settings with Microsoft Intune, and more—with the same amount of time and effort.

Keep endpoints current using the same processes

*Firmware updates via the **Dell Management Portal's Update Module***

*Security patches via **Windows Update for Business***

*Dell-specific BIOS updates via **Dell Command Update***

Manage fleet health and compliance with no extra effort

Patch and provision OS configurations, routinely patch PCs, and deploy security policies without additional requirements or steps.

Dell PC fleets with AMD, Intel®, or both:

Manage with the same tools and the same steps.
